

Typography Regression Practice

Topic: Mathematical Typography

Original examination-style practice material

Name: _____	Date: _____
Time allowed: 15 minutes	Total marks: 8

Show all necessary working. Give units where appropriate. Answer every question.

- 1 Use Gradient = $(y_2 - y_1)/(x_2 - x_1)$ for points (x_1, y_1) and (x_2, y_2) . Evaluate Gradient = $(-3 - 7)/(6 - (-4))$.

[3]

- 2 A speed is measured in m/s^2 in this typography check. Rewrite 25 cm^2 and 1200 kg/m^3 using words for the powers.

[2]

- 3 The symbols v_1 , v_2 and x_{12} are labels. The relation $v^2 = u^2 + 2as$ contains powers; s^{-1} contains a negative power. Explain what the superscript in x^3 means. Treat $A < B$ & $B > C$ as literal comparison text.

End of Question Paper — check your answers.

Typography Regression Practice

Topic: Mathematical Typography

Original examination-style practice material

Total: 8 marks

1 Gradient = -1

Gradient = $(y_2 - y_1)/(x_2 - x_1)$.

Gradient = $(-3 - 7)/(6 - (-4)) = -10/10 = -1$.

Marks: correct signed numerator · correct signed denominator · gradient [3]

2 25 square centimetres; 1200 kilograms per cubic metre

m/s^2 means metres per second squared; m/s^3 means metres per second cubed.

cm^2 is square centimetres and m^3 is cubic metres.

Marks: square unit · cubic unit [2]

3 Subscripts label quantities; x^3 means x multiplied by itself three times.

$x_1, x_2, y_1, y_2, v_1, v_2$ and x_{12} use subscripts.

x^2, x^3, v^2 and s^{-1} use superscripts.

The literal comparison remains $A < B$ & $B > C$.

Marks: subscript meaning · cube meaning · safe comparison text [3]
